11/9/2005

LSI recently introduced a new Intersurgical, Inc. development in the non-rebreather mask, the “**Respi-Check**®”, that will allow Mass Casualty Incident medical personnel and / or U.S. Military medical transport personnel to quickly determine if a patient is still breathing, and, as well, assist the caregiver to quickly determine a calculation of the patient’s breathing rate.

Because we feel that this new mask will make a difference to the 1st responders and their potential patients in MCI / WMD events, Lifesaving Systems, Inc. is including 20 of these special “**Respi-Check**®” non-rebreather masks in both the **LSI Part # CPR-9a** and **LSI Part # CPR-9b** Mass Casualty O₂ Manifold Hard Case configurations.

The new “**Respi-Check**®” Adult High Concentration Non-Rebreather Mask with Tube (**LSI Part # CPR-28**) will be packaged in cases of 50 each. Please fax orders to (770) 552-8644.

Please let us know your impressions of this new development in non-rebreather masks, and where you also might want to utilize the “**Respi-Check**®”. Just call us at toll free (866) 699-5283, or just send an E-mail reply to Lsitcleve@aol.com.

Thank you for your interest. LSI stands ready to assist your efforts to make a difference.
