

## SCBA Regulator With Two 50 PSI DISS Ports

This unique regulator (**LSI** Part # CPR-5), included with the **HAZMAT Oxylator Resuscitation Kit** (**LSI** Part # CPR-11), is utilized by all the Office of Homeland Defense *National Medical Response Teams* (NMRTs), some *Metropolitan Medical Response Systems* (MMRSs), some *National Guard WMD / CSTs*. As well, all the *FEMA USAR teams* list the SCBA regulator on their equipment requirements list. In a mass casualty situation resulting from a chemical inhalation, the SCBA Regulator provides a back-up SCBA tank option to operate the Oxylator EMXb or Oxylator EM-100b patient ventilation device when O<sub>2</sub> tank sources are depleted or not readily replenished. With an additional coupler (**LSI** Part # CPR-5a), the SCBA regulator can then be attached to a scuba tank for additional back-up operation.
